T1

TAKE BACK YOUR ATTENTION.

A digital wellbeing platform helping people build healthier relationships with their screens through active accountability and context-aware focus.

- ✓ Android Production Live (v1.0.9)
- ✓ 12,540+ Verified OEM Devices
- ✓ Zero Foreground Service Friction

Your phone is competing for your attention.

Every interface is engineered by specialized teams to maximize screen time, making discipline a constant uphill battle against algorithmic feeds.

RESEARCH BENCHMARK · UNIVERSITY OF CALIFORNIA

47 Seconds

The average time a modern knowledge worker focuses on any screen before switching or getting interrupted.

Down from 2.5 minutes in 2004. Involuntary micro-distractions fragment cognitive endurance, leading to chronic mental fatigue and an inability to sustain uninterrupted deep work.

FRICTION WITHOUT CONSEQUENCE

94%

Of traditional blocker apps are uninstalled within two weeks.

Self-imposed timers fail because willpower is a depreciating finite reserve. Breaking a solitary timer has zero real-world cost.

THE DUAL-USE DILEMMA

83%

Of modern productive tasks require tools that also house distractions.

Shutting down Chrome or Slack breaks legitimate study and engineering work, forcing users to disable blunt blockers entirely.

Knowing your screen time isn't enough.

There is a fundamental difference between merely measuring behaviour and creating the conditions that help people change it.

01 · PASSIVE TRACKING

Awareness Without Action

Native tools like Apple Screen Time and Android Digital Wellbeing tell you how many hours you wasted, but only after the day is gone. Retrospective graphs do not stop the next impulse pick-up.

Status Quo: Guilt without intervention

02 · PUNITIVE BLOCKING

Friction Without Context

Traditional blockers treat every screen opening as a moral failure. Shutting down browser access breaks genuine study and communication, forcing users to deactivate the application.

Status Quo: High friction & early churn

03 · THE T1 PHILOSOPHY

Active Behavioral Design

Habitual technology use changes when attention is given clear structure, peer accountability, and tangible recognition. Focus should feel like a disciplined craft, not a punishment.

T1 Shift: Social stakes + Work context

Meet T1.

A focused operating environment designed for individuals who care about their work, their time, and their cognitive clarity.

OBJECTIVE MEASUREMENT

The Focus Score (0–100)

A normalized metric evaluating continuous deep work blocks, streak integrity, and duel completion without subjective self-reporting.

INTENTIONAL STRUCTURE

Synchronized Sprint Sessions

Structured deep-work sprints (15m, 25m, 45m). Dual timers hold both operators to identical accountable standards.

WORK ENVIRONMENT INTEGRATION

Context-Aware App Handling

Differentiates between legitimate documentation/study browsers and infinite algorithmic reels so real work is never interrupted.

TANGIBLE VALUE

Proof-of-Focus Economy

Completed sessions generate verified $T1 tokens redeemable for exclusive discipline milestones, streak protection, and rank status.

A simple, three-step methodology.

Designed around cognitive psychology principles to foster long-term behavioral change without overwhelming friction.

PHASE 01

UNDERSTAND

T1 monitors background interaction patterns using Android's native UsageStats API without accessing personal messages, browsing content, or credentials.

Result: Uncovers exact times of involuntary attention leakage throughout the day.

PHASE 02

INTERVENE

At the moment of distraction, T1 presents calm, timely micro-interventions or launches a focused peer session to break compulsive phone unlock loops.

Result: Replaces automated dopamine scrolling with deliberate conscious choice.

PHASE 03

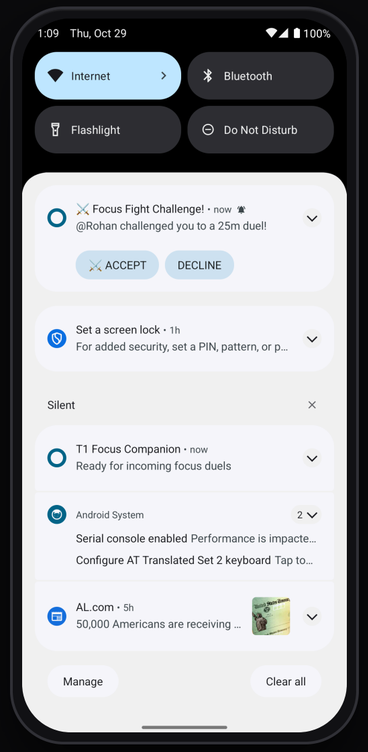

IMPROVE

Focus time is recognized and recorded. Users earn token benchmarks, track weekly consistency, and observe measurable improvements in continuous work blocks.

Result: Builds self-reinforcing daily momentum that outlasts temporary motivation.

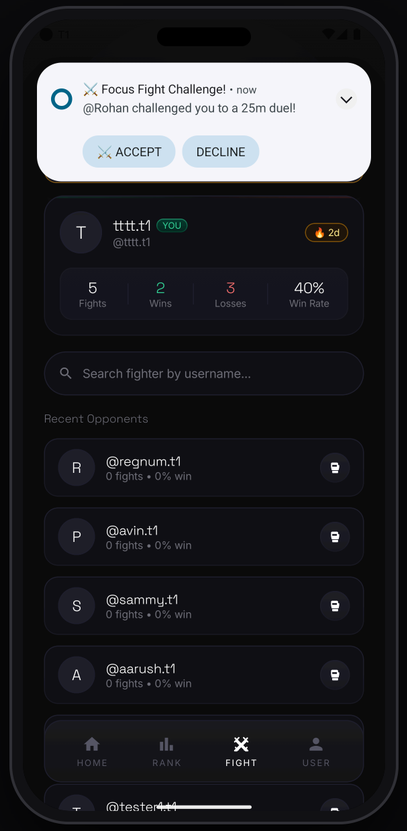

Engineered for daily utility & real-time stakes.

Actual production screens demonstrating live focus sessions, real-time peer duels, and context-aware tool whitelisting.

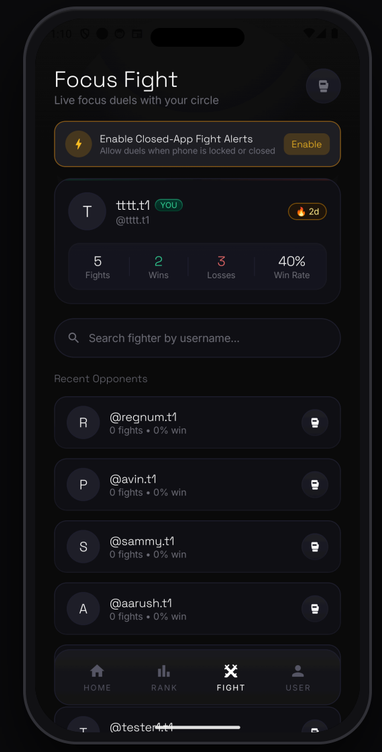

Instant Heads-Up Actions

Wakes terminated apps on all Android OEMs

Focus Fight Protocol

Real-Time Synchronized Peer Duels

Dual-Purpose Whitelist

Permits essential work tools like Chrome

A large problem. A focused starting point.

Beginning with high-intent knowledge segments where personal attention and cognitive endurance directly correlate with career and academic outcomes.

INITIAL TARGET AUDIENCE

Competitive Students & Remote Engineers

Our primary demographic consists of students preparing for demanding competitive examinations (JEE, NEET, USMLE, Bar, CFA) and remote software engineers where distraction equals lost performance.

High Intent to Pay	$15–$50/mo already spent on study aids
Natural Network Density	Clustered in cohorts, dorms & campuses

MARKET CONTEXT · GRAND VIEW RESEARCH

$9.2B

Global Digital Wellbeing & Productivity Software by 2028 (18.2% CAGR).

Driven by escalating employer and student demand for distraction management. Moving from passive mindfulness apps toward active cognitive endurance tools.

INITIAL DISTRIBUTION CHANNELS

Direct collegiate ambassador partnerships across top STEM universities and organic peer-to-peer duel invitation links.

Transparent monetization aligned with user success.

No ad networks, no data brokering. Revenue is generated purely from delivering verifiable focus and personal productivity value.

REVENUE STREAM 01

T1 Pro Subscription

$7.99 / month or $59 / year. Provides unlimited daily Focus Fights, advanced AI habit diagnostics, automated cloud streak recovery, and historical analytics exports.

Model: Individual recurring SaaS

REVENUE STREAM 02

Token Economics & Stakes

Micro-packages for wager tokens ($2.99–$9.99). The platform manages transparent peer escrows and retains a modest 5% tournament operational pool fee.

Model: Transactional in-app utility

REVENUE STREAM 03

Campus & Team Licenses

Cohort licenses for university test-prep academies, coding bootcamps, and remote engineering studios requiring structured study halls and team focus tracking.

Model: Annual B2B seat licensing

What we've built. What we're learning.

A grounded summary of our technical milestones, production readiness, and active user validation.

MILESTONE · COMPLETED

Production Release Built

Version 1.0.9 (VersionCode 10) built and validated. Meets Google Play Store Target SDK 36 guidelines with zero foreground service compliance friction.

✓ 12,540+ Android devices verified

MILESTONE · COMPLETED

Cross-OEM Reliability

Solved aggressive background battery killing on Xiaomi MIUI, Samsung OneUI, OnePlus OxygenOS, and Pixel via custom AlarmManager watchdog architecture.

✓ Challenge alerts wake terminated apps

MILESTONE · IN PROGRESS

Closed Testing & Cohorts

Currently gathering quantitative interaction telemetry and session completion metrics with our initial cohort of competitive student testers.

✓ Play Console Closed Track Active

A disciplined, phased rollout.

Progressing systematically from our core Android foundation to multi-platform study environments.

PHASE 01 · CURRENT

Product Validation

Android release stabilization, battery watchdog verification, 1v1 Focus Fight mechanics, closed testing graduation on Play Store.

PHASE 02 · Q2 2026

Campus Pilot

Study squad multi-user sessions (4–8 people), collegiate ambassador program, token rewards store launch for discipline milestones.

PHASE 03 · Q3–Q4 2026

Retention & iOS

Native iOS application using Apple ScreenTime FamilyControls API, weekly streak protection, synchronized study room multiplayer.

PHASE 04 · 2027

Desktop & B2B

macOS and Windows desktop companion app for unified cross-device lockouts, and institutional team cohort licensing for universities.

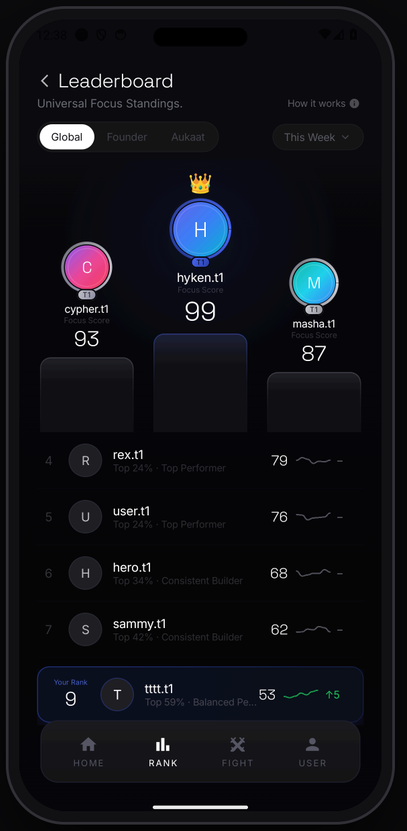

A healthier relationship with technology.

We envision a world where technology empowers human intention rather than quietly eroding it.

"The most valuable resource of the 21st century is not capital, compute, or code. It is human attention."

T1 is built on the conviction that deep focus is a learnable, protectable craft. By designing systems that elevate human agency over algorithmic impulses, we enable the next generation of builders, scholars, and thinkers to do their finest work.

Not by retreating from digital tools, but by mastering them.

T1.

YOUR ATTENTION.
YOUR ADVANTAGE.

Let's build better digital habits.
