THE COGNITIVE PROOF-OF-WORK STANDARD

Unbroken Human Deep Focus Turned into a Verifiable Economy.

The world's first **Proof-of-Focus Engine**. Built for solo founders, engineers, and competitive aspirants who reject toddler app blockers and demand authentic behavioral progress tracking.

7-Day
ROLLING BASELINE
Dynamic relative progress, not arbitrary 2-hr limits.

100%
LOCAL-FIRST TELEMETRY
Zero-cloud usage tracking. <1.2% daily battery drain.

12:00 AM
MIDNIGHT REFLECTION
Unfiltered behavioral audit replacing annoying blocks.

Nov 4
PLAY STORE LAUNCH
Android 16 / Target SDK 36 production certified.

THE TRILLION-DOLLAR ATTENTION PARADOX

Knowledge output demands deep focus. Modern platforms are engineered to shatter it.

The world's most ambitious individuals unlock their phones out of pure compulsion, losing up to 4 hours daily to algorithmic dopamine loops with zero proof-of-work for their discipline.

96+

DAILY PHONE UNLOCKS

The average high-agency knowledge worker unlocks their phone every 9.3 minutes, fracturing neuro-cognitive momentum before flow state ever initiates.

23m 15s

COGNITIVE RECOVERY PENALTY

Academic research (Gloria Mark, UC Irvine) proves a single notification switch requires 23+ minutes to regain deep focus, costing 40% in lost problem-solving throughput.

$450B

ANNUAL LOST PRODUCTIVITY

Global knowledge work loss due to fragmented attention spans. Ambitious solo founders and competitive exam candidates experience severe digital guilt and burn out.

Source: UC Irvine Attention Studies & Gloria Mark Behavioral Labs

THE TODDLER PARADOX

Existing screen-time apps treat adults like toddlers. Self-discipline cannot be outsourced to a password.

Traditional blockers (Opal, Forest, Freedom) create artificial friction walls. Inevitably, human psychology wins and the app gets destroyed.

87%

48-HOUR UNINSTALL RATE

When an ambitious adult urgently needs WhatsApp or email and faces a rigid lockout screen, **Psychological Reactance** triggers rage. The blocker is uninstalled within 48 hours.

0%

ZERO RELATIVE CONTEXT

Existing apps use static 2-hour limits. If someone goes from 8 hours of distraction to 4 hours, static blockers call them a failure. T1 recognizes it as a massive 4-hour victory.

Zero

VERIFIABLE PROOF-OF-WORK

You hit the gym and gain visible muscle; you commit code and build a GitHub streak. But when you engage in 6 hours of deep cognitive focus, there is zero verifiable status or currency.

NOT BLOCKING — RELATIVE UPGRADING

An Unfiltered Mirror of Reality. Are you upgrading compared to yesterday?

T1 never blocks your phone. Instead, it provides quiet, relentless accountability and turns discipline into a verifiable competitive asset.

❌ The Flawed Incumbent Model (Opal / Forest)

- **Arbitrary Locks:** Pins, timer locks, and VPNs that user eventually bypasses.
- **Intrusive Popups:** Mid-day interruptions that cause user annoyance and frustration.
- **Punitive Guilt:** "You killed a digital tree" — infantilizing high-agency builders.
- **Invasive Cloud Telemetry:** Third-party tracking profiles that compromise personal privacy.

✅ The T1 Relative Engine Model

- **Zero Lockout Friction:** User always retains 100% agency. No childish PIN barriers.
- **12:00 AM Midnight Reflection:** A quiet, peaceful audit showing exact wins, lags, and percentile score.
- **Dynamic 7-Day Baseline:** Anchors progress to real personal habits, celebrating daily relative gains.
- **100% On-Device Privacy:** Zero cloud logs, zero keystroke sniffing. <1.2% battery drain.

THE 4-STAGE PROOF-OF-FOCUS ENGINE

How Telemetry Becomes Verifiable Reputation.

A mathematically idempotent pipeline running on-device with zero server compute overhead.

STAGE 01

Local Ingestion

Android `UsageStatsManager` deltas polled locally via WorkManager. Private chats and titles never leave device storage.

STAGE 02

Rolling Baseline

Calculates weighted 7-day intraday usage moving average, automatically normalizing weekends, holidays, and high-demand days.

STAGE 03

Focus Score (0-99)

Translates saved hours into a normalized 0–99 Focus Score and dynamic Percentile Rank benchmarked against active peers.

STAGE 04

Token Mining

Outperforming the 7-day baseline mints non-inflatable T1 Tokens. Unlocks rank frames, custom neon rings, and league entries.

Mathematical Invariance Guarantee:

$$\Delta \text{Focus} = (\text{Baseline_7D} - \text{Distraction_Today}) \cdot \text{Multiplier} \rightarrow \text{Token_Mint (Idempotent)}$$

THE LIVE ANDROID PRODUCT

Obsidian Aesthetics & Tactile Pacing.

Designed to feel as serious as a Bloomberg Terminal, as sleek as Linear, and as rewarding as Whoop.

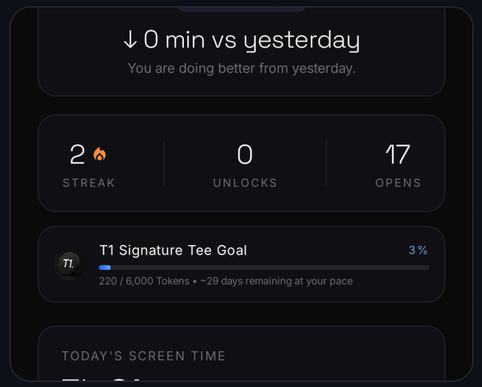

01. Focus Ring

Dynamic animated canvas arc tracking your 0–99 score in real time.

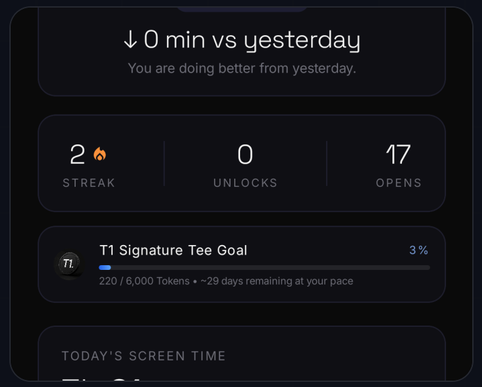

02. 12-App Intake

Official brand badges with instant Productive vs Distraction toggling.

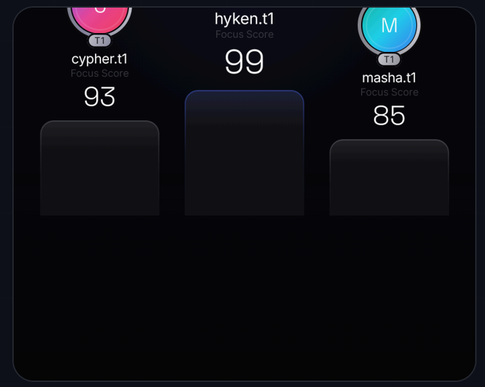

03. Timer Arena

Anti-tamper Pomodoro sessions that mint Proof-of-Focus tokens.

04. Leaderboard

Real peer percentiles with Ghost Mode privacy options.

IDEAL CUSTOMER PROFILE (ICP)

Built for High-Agency Builders Who Cannot Afford Distraction.

We do not target casual smartphone users. We focus on people whose financial and career outcomes depend on daily deep work.

PRIMARY ICP 01

Competitive Exam Aspirants

40M+ Students preparing for hyper-competitive exams (IIT-JEE, UPSC, NEET, GATE, CAT). Studying 8–12 hrs/day where a 1-hour lapse feels catastrophic. They crave authentic peer benchmarking.

Pain Point: Extreme guilt + Blocker rage uninstalls.

PRIMARY ICP 02

Solo Tech Founders & Builders

Indie hackers, software engineers, and founders managing their own schedules. They track their sleep with Oura/Whoop and their runs with Strava, but have zero metrics for cognitive work.

Pain Point: No proof-of-work for 6-hr coding sprints.

EXPANSION ICP 03

Remote Knowledge Workers

High-income remote professionals battling constant Slack, email, and social tab interruptions while working from home without supervision.

Pain Point: Fragmented attention destroys flow state.

PROOF-OF-FOCUS (POF)

T1 Tokens Cannot Be Bought With Money. They Must Be Mined With Cognitive Sweat.

A closed-loop behavioral reward engine turning discipline into an authentic social currency.

Phase 1

IN-APP COSMETIC STATUS

Users redeem tokens for high-contrast neon profile rings, rare leaderboard badges, and streak freeze insurance. Creates viral screenshot sharing on X and WhatsApp study groups.

Phase 2

HIGH-STAKES WAGERING POOLS

Users stake 500 tokens in 30-day cohort sprint pools with peers. The top 20% disciplined performers split the prize pool. Massive organic retention with real skin-in-the-game.

Phase 3

SOFTWARE & HARDWARE PERKS

Partner brand perks (Notion, Cursor, Audible, physical hoodies) redeemable exclusively through verified focus tokens. Proof of 500+ deep focus hours as a verified builder badge.

SUSTAINABLE DEFENSIBILITY

Why OS Giants & Blocker Apps Cannot Easily Copy T1.

DIMENSION	APPLE / GOOGLE SCREEN TIME	OPAL / FREEDOM	FOREST	T1: TOP 1%
Behavioral Model	Passive, boring charts	Punitive VPN locks	Infantile timer (tree dies)	**Relative 7D Baseline + 12 AM Audit**
Psychological Reactance	Ignored	Severe (87% uninstall)	Moderate (cheated easily)	**Zero (100% agency preserved)**
Privacy & Battery	OS-level	Heavy battery VPN drain	Lightweight	**<1.2% battery, 100% On-Device**
Proof-of-Focus Economy	**None**	**None**	**Simple coins**	**Token Mining + Peer Leagues**
Target SDK & Compliance	Native	VPN profile risks	Legacy APIs	**Target SDK 36 (Android 16 certified)**

MARKET OPPORTUNITY & TIMING

A $4.8 Billion Market Expanding With Every AI Algorithm.

As generative AI produces infinite content, unbroken human focus becomes the single rarest asset on Earth.

$4.8B

TAM (GLOBAL WELL-BEING)

Total global digital well-being and productivity app market growing at 14.2% CAGR through 2028.

65M+

SAM (HIGH-AGENCY BUILDERS)

English/Hindi-speaking competitive exam aspirants, software engineers, and founders in India & SEA.

350,000

SOM (18-MONTH BEACHHEAD)

Active community builders and students across elite coaching centers and tech campuses.

Milestone Status: Google Play Launch Scheduled

Target SDK 36 certified, prominent disclosures approved. Public rollout begins **November 4, 2026**.

READY FOR DISTRIBUTION

Market Projections: Statista & Grand View Research Digital Health Reports

SCALABLE $100M+ UNIT ECONOMICS

High-Margin, Multi-Tiered Monetization.

Monetizing across consumer subscription, cohort-based B2B institutional licensing, and platform take-rates.

$9.99/mo

B2C: T1 PRO TIER

- Deep 90-day cognitive telemetry analysis
- Custom private friend wagering arenas
- 2x Token mining multiplier on focus blocks
- 78% Projected gross margins

$5.00/seat

B2B: COHORTS & COACHING

- Enterprise coaching institute leaderboards (IIT-JEE, UPSC)
- Engineering team focus analytics for remote startups
- Anonymous team burn-out indicators
- High-retention annual contracts ($60/seat/yr)

5% - 10%

PLATFORM TAKE-RATES

- Platform rake on peer-to-peer wagering prize pools
- Sponsored brand reward perk placements
- Exclusive hardware merchandise partnerships
- Zero-marginal-cost scaling

TEAM ZYNETH • FOUNDED 2026

"Our vision is simple: To become the universal proof-of-work standard for human focus."

We have built a production-grade, policy-audited native Android app. We are scaling a community of relentless builders who refuse to let algorithms dictate their destiny.
